⚠ **WARNING**

This service information is designed for experienced repair technicians only and is not designed for use by the general public. It does not contain warnings or cautions to advise non-technical individuals of potential dangers in attempting to service a product. Products powered by electricity should be serviced or repaired only by experienced professional technicians. Any attempt to service or repair the product or products dealt with in this service information by anyone else could result in serious injury or death.

IMPORTANT SAFETY NOTICE

There are special components used in this equipment which are important for safety. These parts are marked by ⚠ in the Schematic Diagrams, Circuit Board Diagrams, Exploded Views and Replacement Parts List. It is essential that these critical parts should be replaced with manufacturer's specified parts to prevent shock, fire or other hazards. Do not modify the original design without permission of manufacturer.

IMPORTANT INFORMATION ABOUT LEAD FREE, (PbF), SOLDERING

If lead free solder was used in the manufacture of this product, the printed circuit boards will be marked PbF. Standard leaded, (Pb), solder can be used as usual on boards without the PbF mark. When this mark does appear, please read and follow the special instructions described in this manual on the use of PbF and how it might be permissible to use Pb solder during service and repair work.

- When you note the serial number, write down all 11 digits. The serial number may be found on the bottom of the unit.
- The illustrations in this Service Manual may vary slightly from the actual product.

Note for TABLE OF CONTENTS:
Because sections 5, 6 and 7 of this manual are extracts from the operating instructions for this model, they are subject to change without notice. You can download and refer to the original operating instructions on TSN Server for further information.

TABLE OF CONTENTS

1 Safety Precautions

1.1. For Service Technicians

- **Repair service shall be provided in accordance with repair technology information such as service manual so as to prevent fires, injury or electric shock, which can be caused by improper repair work**.
  1. When repair services are provided, neither the products nor their parts or members shall be remodeled.
  2. If a lead wire assembly is supplied as a repair part, the entire lead wire assembly shall be replaced.
  3. FASTON terminals shall be plugged straight in and unplugged straight out.

- **ICs and LSIs are vulnerable to static electricity.**
  When repairing, the following precautions will help prevent recurring malfunctions.
  1. Cover plastic parts boxes with aluminum foil.
  2. Ground the soldering irons.
  3. Use a conductive mat on worktable.
  4. Do not grasp IC or LSI pins with bare fingers.

2 Warning

2.1. Battery Caution

1. Danger of explosion if battery is incorrectly replaced.
2. Replace only with the same or equivalent type recommended by the manufacturer.
3. Dispose of used batteries according to the manufacture's Instructions.

2.2. About Lead Free Solder (Pbf: Pb free)

Note:

In the information below, Pb, the symbol for lead in the periodic table of elements, will refer to standard solder or solder that contains lead.

We will use PbF solder when discussing the lead free solder used in our manufacturing process which is made from Tin (Sn), Silver (Ag), and Copper (Cu).

This model, and others like it, manufactured using lead free solder will have PbF stamped on the PCB. For service and repair work we suggest using the same type of solder.
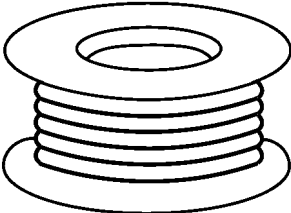

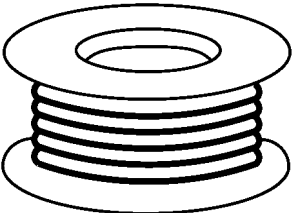

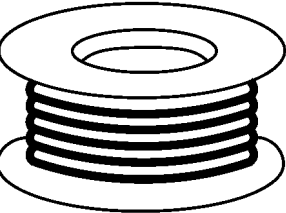

Caution

- PbF solder has a melting point that is 50 °F ~ 70 °F (30 °C ~ 40 °C) higher than Pb solder. Please use a soldering iron with temperature control and adjust it to 700 °F ± 20 °F (370 °C ± 10 °C).
- Exercise care while using higher temperature soldering irons.:
  Do not heat the PCB for too long time in order to prevent solder splash or damage to the PCB.
- PbF solder will tend to splash if it is heated much higher than its melting point, approximately 1100 °F (600 °C).
- When applying PbF solder to double layered boards, please check the component side for excess which may flow onto the opposite side (See the figure below).

(Slice View)
2.2.1. Suggested PbF Solder

There are several types of PbF solder available commercially. While this product is manufactured using Tin, Silver, and Copper (Sn+Ag+Cu), you can also use Tin and Copper (Sn+Cu) or Tin, Zinc, and Bismuth (Sn+Zn+Bi). Please check the manufacturer's specific instructions for the melting points of their products and any precautions for using their product with other materials.
The following lead free (PbF) solder wire sizes are recommended for service of this product: 0.3 mm, 0.6 mm and 1.0 mm.

0.3 mm X 100 g	0.6 mm X 100 g	1.0 mm X 100 g

2.3. Discarding of P. C. Board

When discarding P. C. Board, delete all personal information such as telephone directory and caller list or scrap P. C. Board.

3 Specifications

■ **Standard:**
DECT 6.0 (Digital Enhanced Cordless Telecommunications 6.0)

■ **Number of channels:**
60 Duplex Channels

■ **Frequency range:**
1.92 GHz to 1.93 GHz

■ **Duplex procedure:**
TDMA (Time Division Multiple Access)

■ **Channel spacing:**
1,728 kHz

■ **Bit rate:**
1,152 kbit/s

■ **Modulation:**
GFSK (Gaussian Frequency Shift Keying)

■ **RF transmission power:**
Approx. 100 mW

■ **Voice coding:**
ADPCM 32 kbit/s

	Base Unit	Handset	Charger

• **Optional headset:** RP-TCA86, RP-TCA91, RP-TCA92, RP-TCA94, or RP-TCA95

4 Technical Descriptions

4.1. Block Diagram (Base Unit)

KX-TG8201/8202 BLOCK DIAGRAM (BASE UNIT)

4.2. Circuit Operation (Base Unit)

4.2.1. Outline

Base unit consists of the following ICs as shown in **Block Diagram (Base Unit)** (P.7).
• DECT BBIC (**B**ase **B**and IC): IC7
  - Handling all the audio, signal and data processing needed in a DECT base unit
  - Controlling the DECT specific physical layer and radio section (**B**urst **M**odule **C**ontroller section)
  - ADPCM code filter for speech encoding and speech decoding (DSP section)
  - Echo-cancellation and Echo-suppression (DSP section)
  - Any tones (tone, sidetone, ringing tone, etc.) generation (DSP section)
  - DTMF receiver (DSP section)
  - Clock Generation for RF Module
  - ADC, DAC, timer, and power control circuitry
  - All interfaces (ex: RF module, EEPROM, LED, Analog Front End, etc.)
• RF Module: IC10
  - PLL Oscillator
  - Detector
  - Compress/Expander
  - First Mixer
  - Amplifier for transmission and reception
• EEPROM: IC5
  - Temporary operating parameters (for RF, etc.)
• Additionally,
  - Power Supply Circuit (+3.3 V, +2.5 V, +1.8 V output)
  - Crystal Circuit (10.368 MHz)
  - Charge Circuit
  - Telephone Line Interface Circuit

4.2.2. Power Supply Circuit

The power is supplied to the DECT BBIC, RF Module, EEPROM and Charge Contact from AC Adaptor (+6.5 V) as shown in Fig.101. The power supply is as follows;

- DECT BBIC (IC7):
  CN2 (+6.5 V) → IC1 → Q9 → IC7
  CN2 (+6.5 V) → IC1 → Q8 → IC7
- RF Module (IC10):
  CN2 (+6.5 V) → IC1 → Q8 → IC10 (Radio Transceiver) (Digital)
  CN2 (+6.5 V) → IC1 → Q9 → IC10 (Radio Transceiver) (Analog)
  CN2 (+6.5 V) → IC1 → R125 → IC10 (Power AMP)
- EEPROM (IC5):
  CN2 (+6.5 V) → IC1 → Q9 → IC5
- Charge Contact (TP16):
  CN2 (+6.5 V) → R57 → R56 → R55 → D22 → TP16

<Fig.101>
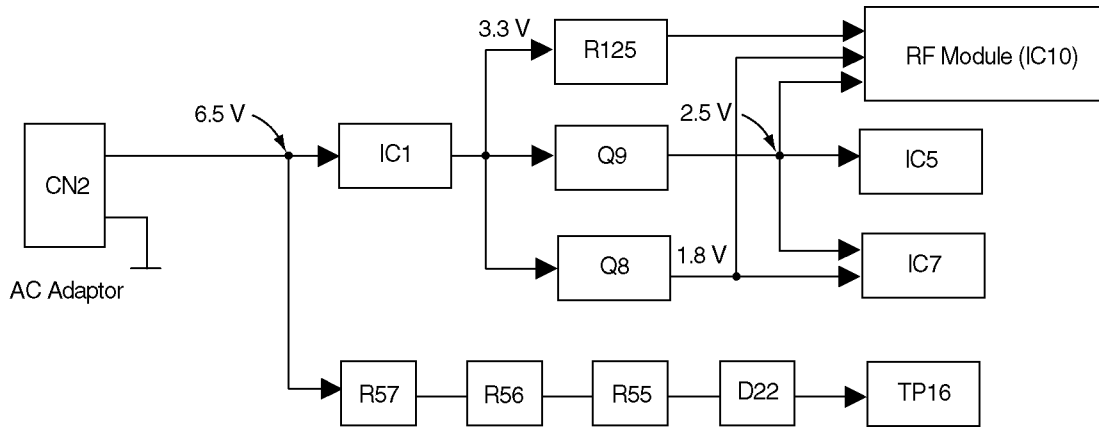

4.2.3. Telephone Line Interface

<Function>

• Bell signal detection

• Clip signal detection

• ON/OFF hook circuit

Bell & Clip (: Calling Line Identification Presentation: Caller ID) signal detection:

In the standby mode, Q3 is open to cut the DC loop current and decrease the ring load.

When ring voltage appears at the L1T (A) and L1R (B) leads (when the telephone rings), the AC ring voltage is transferred as follows;

• A $\rightarrow$ C4 $\rightarrow$ R6 $\rightarrow$ R33 $\rightarrow$ IC7 Pin 60 (CID INp)

• B $\rightarrow$ C3 $\rightarrow$ R4 $\rightarrow$ R35 $\rightarrow$ IC7 Pin 52 (CID INn)

ON/OFF hook circuit:

In the standby mode, Q3 is open, and connected as to cut the DC loop current and to cut the voice signal. The unit is consequently in an **on-hook condition**.

When IC7 detects a ring signal or press the TALK Key onto the handset, Q4 turns on and then Q3 turns on, thus providing an **off-hook condition** (DC current flows through the circuit) and the following signal flow makes the loop current.

• A $\rightarrow$ D3 $\rightarrow$ Q3 $\rightarrow$ Q5 $\rightarrow$ R21 $\rightarrow$ R22 $\rightarrow$ D3 $\rightarrow$ B [**OFF HOOK**]

4.2.4. Transmitter/Receiver

• Audio Circuits and DTMF tone signal circuits.

Base unit and handset mainly consist of RF Module and DECT BBIC.

Base unit and handset transmit/receive voice signal and data signal through the antenna on carrier frequency.

Signal Path:

*Refer to **Signal Route** (P.14).

4.2.4.1. Transmitter Block

The voice signal input from the TEL LINE interface goes to RF Module (IC10) through DECT BBIC (IC7) as shown in **Block Diagram (Base Unit)** (P.7)

The voice signal passes through the analog part of IC7 where it is amplified and converted to a digital audio stream signal. The burst switch controller processes this stream performing encryption and scrambling, adding the various other fields to produce the standard DECT frame, assigning to a time slot and channel etc.

In IC10, the carrier frequency is changing, and frequency modulated RF signal is generated and amplified, and radiated from antenna. Handset detects the voice signal or data signal in the circuit same as the following explanation of Receiver Block.

4.2.4.2. Receiver Block

The signal of 1900 MHz band (1920 MHz ~ 1930 MHz) which is input from antenna is input to IC10 as shown in **Block Diagram (Base Unit)** (P.7).

In IC10, the signal of 1900 MHz band is downconverted to 864 kHz signal and demodulated, and goes to IC7 as standard DECT frames. It passes through the decoding section burst switch controller where it separates out the frame information and performs de-encryption and de-scrambling as required. It then goes to the DSP section where it is turned back into analog audio.

This is amplified by the analog front end, and goes to the TEL LINE Interface.

4.3. Block Diagram (Handset)
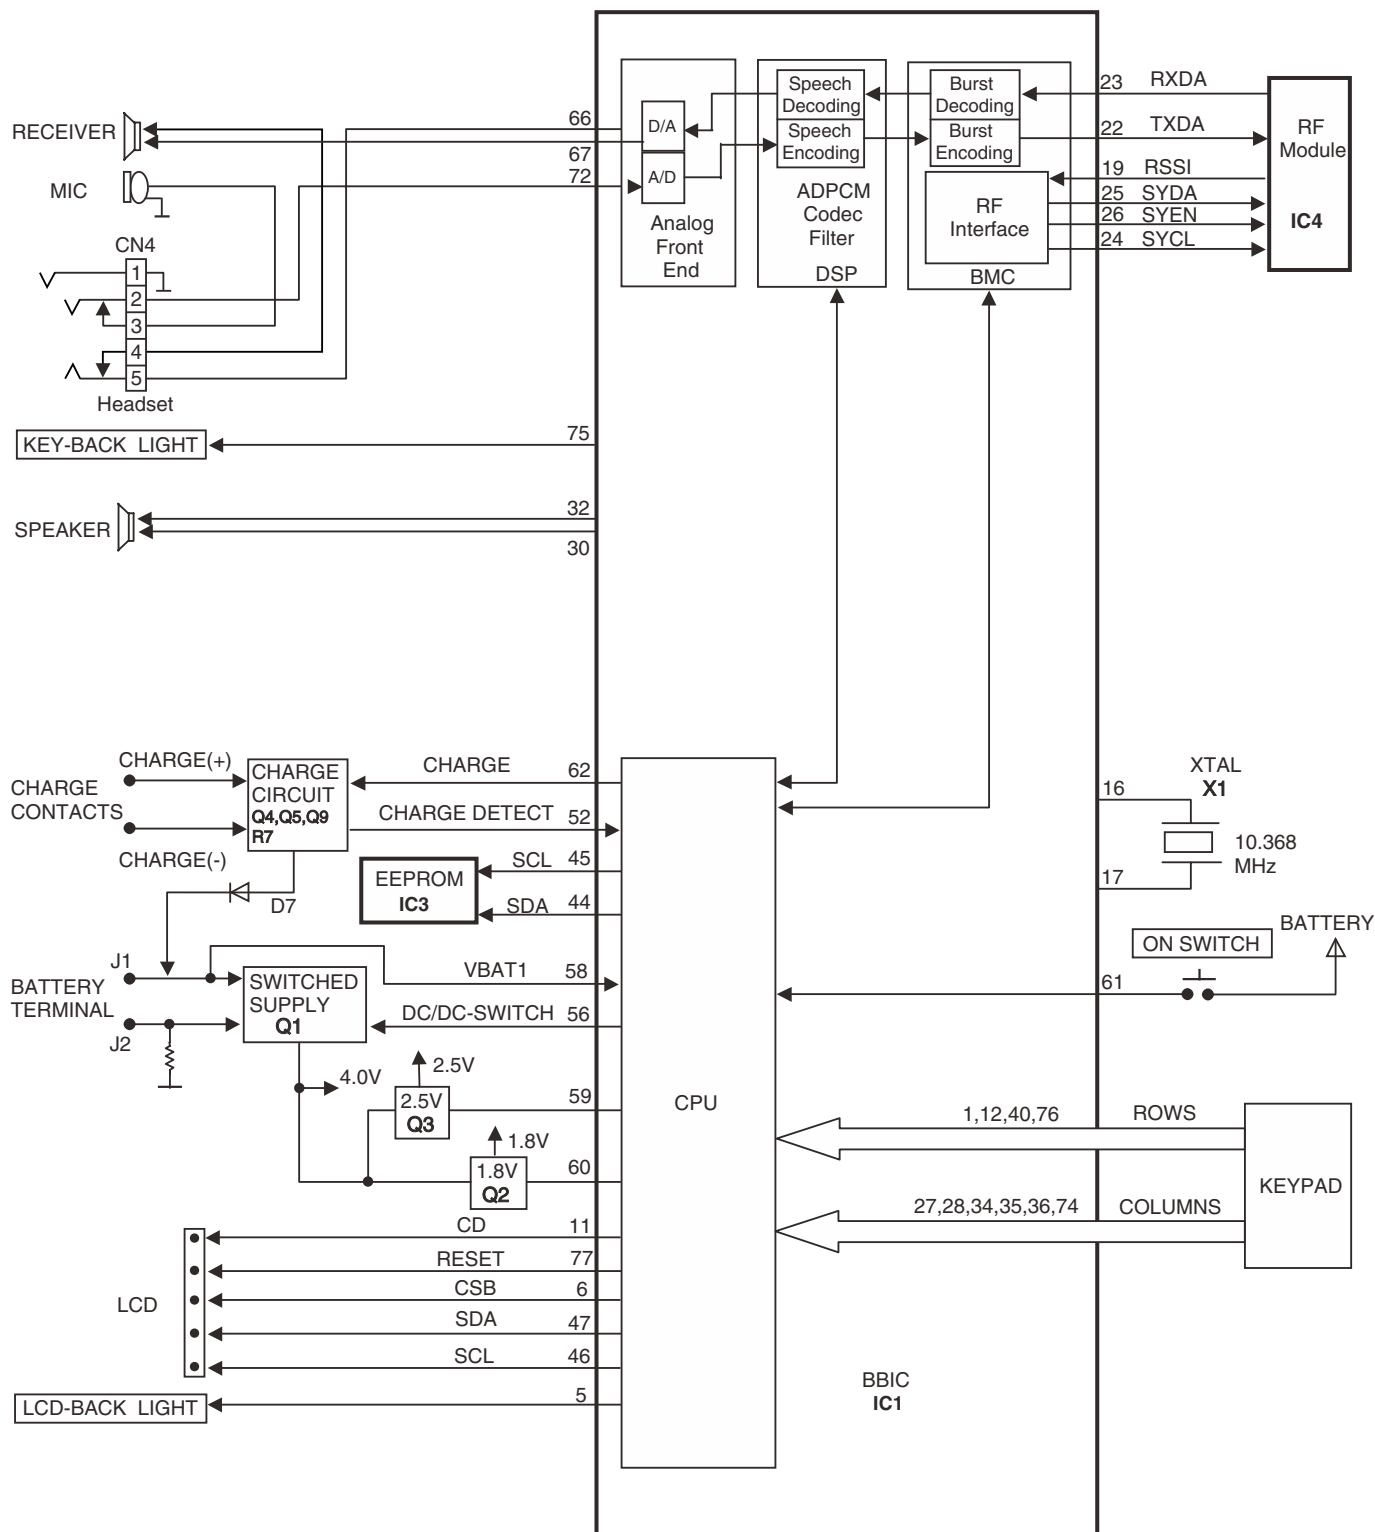

KX-TGA820 BLOCK DIAGRAM (HANDSET)

4.4. Circuit Operation (Handset)

4.4.1. Outline

Handset consists of the following ICs as shown in **Block Diagram (Handset)** (P.11).

- DECT BBIC (**B**ase **B**and IC): IC1
    - All data signals (forming/analyzing ACK or CMD signal)
    - All interfaces (ex: Key, Detector Circuit, Charge, DC/DC Converter, EEPROM, LCD)
- RF Module: IC4
    - PLL Oscillator
    - Detector
    - Compress/Expander
    - Amplifier for transmission and reception
- EEPROM: IC3
    - Temporary operating parameters (for RF, etc.)

4.4.2. Power Supply Circuit/Reset Circuit

Circuit Operation:

When power on the handset, the voltage is as follows;

BATTERY(2.2 V ~ 2.6 V: J1) $\rightarrow$ F1, L1, D1 $\rightarrow$ Q2 (1.8 V), Q3 (2.5 V), Q1 (3.3 V)

The Reset signal generates IC1 (53 pin) and 1.8 V.
4.4.3. Charge Circuit

Circuit Operation:

When charging the handset on the base unit, the charge current is as follows;

DC+(6.5 V) $\rightarrow$ R57 $\rightarrow$ R56 $\rightarrow$ R55$\rightarrow$ D22 $\rightarrow$ CHARGE+(Base) $\rightarrow$ CHARGE+(Handset) $\rightarrow$ L4 $\rightarrow$ Q4 $\rightarrow$ D7$\rightarrow$ F1 $\rightarrow$ BATTERY+...

Battery... BATTERY- $\rightarrow$ R45 $\rightarrow$ GND $\rightarrow$ L5 $\rightarrow$ CHARGE-(Handset)$\rightarrow$ CHARGE-(Base) $\rightarrow$ GND $\rightarrow$ DC-(GND)

In this way, the BBIC on handset detects the fact that the battery is charged.

The charge current is controlled by switching Q5 of handset.

Refer to Fig.101 in **Power Supply Circuit** (P.9).

4.4.4. Battery Low/Power Down Detector

Circuit Operation:

"Battery Low" and "Power Down" are detected by BBIC which check the voltage from battery.

The detected voltage is as follows;

- Battery Low

Battery voltage: V(Batt) $\leqq$ 2.25 V ± 50 mV

The BBIC detects this level and "▯" starts flashing.

- Power Down

Battery voltage: V(Batt) $\leqq$ 2.0 V ± 50 mV

The BBIC detects this level and power down.

4.4.5. Speakerphone

The hands-free loudspeaker at SP+ and SP- is used to generate the ring alarm.

4.5. Circuit Operation (Charger Unit)

4.5.1. Power Supply Circuit

The power supply is as shown.

```
         ┌─────┐              ┌─────┐        ┌─────┐
         │     │──────►──────►│ D1  │───►───►│ R1  │──────────o TP2
         │ J1  │              └─────┘        └─────┘
         │     │────────────────────────────────────────────o TP1
         └─────┘
       AC Adaptor
```

In use	• Line is being used by another handset for calling, registration, etc.
🔋	Battery level

6 Installation Instructions

6.1. Connections

Connect the telephone line cord until it clicks into the base unit and telephone line jack (**❶**). Connect the AC adaptor cord (**❷**) by pressing the plug firmly (**❸**).

Base unit
● Use only the supplied Panasonic AC adaptor PQLV207V.
● Use only the supplied telephone line cord.

Hooks

(120 V AC, 60 Hz)

→ To single-line telephone jack (RJ11C)

Charger
● Use only the supplied Panasonic AC adaptor PQLV209V.

Hooks

Fasten the AC adaptor cord to prevent it from being disconnected.

(120 V AC, 60 Hz)

Note:
● The AC adaptor must remain connected at all times. (It is normal for the adaptor to feel warm during use.)
● The AC adaptor should be connected to a vertically oriented or floor-mounted AC outlet. Do not connect the AC adaptor to a ceiling-mounted AC outlet, as the weight of the adaptor may cause it to become disconnected.
● The unit will not work during a power failure. We recommend connecting a corded telephone to the same telephone line or to the same telephone line jack using a T-adaptor.

If you subscribe to a DSL service
Please attach a noise filter (contact your DSL provider) to the telephone line between the base unit and the telephone line jack in the event of the following:
– Noise is heard during conversations.
– Call Display features do not function properly.

To single-line telephone jack (RJ11C)

Noise filter

6.2. Battery

6.2.1. Battery Installation and Replacement

Important:

- Use only the supplied rechargeable batteries HHR-4MPA.
- USE ONLY rechargeable Ni-MH batteries AAA (R03) size.
- Do NOT use Alkaline/Manganese/Ni-Cd batteries.
- Ensure correct polarities ($\oplus$, $\ominus$) when installing the batteries.
- Wipe the battery ends ($\oplus$, $\ominus$) with a dry cloth.
- When installing the batteries, avoid touching the battery ends ($\oplus$, $\ominus$) or the unit contacts.
- When replacing batteries, we recommend using the Panasonic rechargeable batteries HHR-4MPA.

1 Press the notch on the handset cover firmly and slide it in the direction of the arrow.

2 Insert the batteries negative ($\ominus$) end first. Close the handset cover.

Rechargeable Ni-MH ONLY
Note:

- When replacing batteries, remove the old batteries.
Attention:

A nickel metal hydride battery that is recyclable powers the product you have purchased.

Please call 1-800-8-BATTERY (1-800-822-8837) for information on how to recycle this battery.

6.2.2. Battery Charge

Place the handset on the base unit or charger for 7 hours before initial use.

- While charging, "`Charging`" is displayed. When the batteries are fully charged, "`Charge completed`" is displayed.
Base unit: **Charger:**
Note:

- It is normal for the handset to feel warm during charging.
- If you want to use the handset immediately, charge the batteries for at least 15 minutes.
- Clean the charge contacts of the handset, base unit, and charger with a soft, dry cloth. Clean if the unit is subject to the exposure of grease, dust, or high humidity.
- When the batteries are empty, the entire display may go blank and "`Charging`" may not be displayed for about 10 minutes even if you place the handset on the base unit or charger.

Note for service:

The battery strength may not be indicated correctly if the battery is disconnected and connected again, even after it is fully charged. In that case, by recharging the battery as mentioned above, you will get a correct indication of the battery strength.

6.2.3. Battery Level

Battery icon	Battery level
🔋	High
🔋	Medium
🔋	Low ● When flashing: 　Needs to be charged.

Note:

● When the batteries need to be charged, the handset beeps intermittently during use.

6.2.4. Panasonic Ni-MH Battery Performance (supplied batteries)

Operation	Operating time
In continuous use	12 hours max.
In continuous standby mode	150 hours max.

Note:

● Battery operating time may be shortened over time depending on usage conditions and surrounding temperature.

● Battery power is consumed whenever the handset is off the base unit or charger, even when the handset is not in use.

● After the handset is fully charged, displaying "`Charge completed`", it may be left on the base unit or charger without any ill effect on the batteries.

● The battery level may not be displayed correctly or the entire display may go blank after you replace the batteries. In this case, place the handset on the base unit or charger and let it charge for 7 hours.

7 Operation Instructions

7.1. Programmable Settings

You can customize the unit by programming the following features using the handset.

Programming by scrolling through the display menus

1 **【MENU】** (centre of joystick)

2 Select "Menu icon" by pushing the joystick in any direction. → **【SELECT】**

3 Push the joystick up or down to select the desired item in the sub-menu. →
【SELECT】
- In some cases, you may need to select from a second sub-menu. →
【SELECT】

4 Push the joystick up or down to select the desired setting then press **【SAVE】**.
- This step may vary depending on the feature being programmed.
- To exit the operation, press **【OFF】**.

Note:
- In the following table, < > indicates the default setting.
- The current item or setting is highlighted on the display.

Customer support	–	–

*1 If you program these settings using one of the handsets, you do not need to program the same item using another handset.

*2 This feature allows the unit to automatically adjust the date and time setting when caller information is received. To use this feature, set the date and time first.

*3 When the ringer volume is turned off, $\boxtimes$ is displayed and the handset does not ring for outside calls.
However even when the ringer volume is turned off, the handset rings:
– at the minimum level for alarm and intercom calls
– at the maximum level for paging

*4 If you subscribe to a distinctive ring service, select a tone (tone 1 to 5). If you select a melody, you cannot distinguish lines by their ringers.

*5 The preset melodies in this product are used with permission of © 2006 Copyrights Vision Inc.

*6 If you select one of the melody ringer tones, the ringer tone will continue to sound for several seconds if the caller hangs up before you answer. You may hear a dial tone or no one on the line when you answer a call.

*7 The flash time depends on your telephone exchange or host PBX. Consult your PBX supplier if necessary.

*8 Turn this feature off if you prefer not to hear key tones while you are dialing or pressing any keys, including confirmation tones and error tones.

*9 If you subscribe to Call Display service and want to view the caller's information after lifting up the handset to answer a call, turn off this feature.

7.2. Registering a Handset to a Base Unit

The supplied handset and base unit are pre-registered. If for some reason the handset is not registered to the base unit (for example, Y flashes even when the handset is near the base unit), register the handset.

1 **[MENU]** (centre of joystick) → ⚿ → **[SELECT]**

2 **[▼]/[▲]**: "Registration" → **[SELECT]**

3 **[▼]/[▲]**: "HS registration" → **[SELECT]**

4 **Base unit:**
Press and hold **[•))]** (LOCATOR) on the base unit for about 5 seconds.
(No registration tone)
- If all registered handsets start ringing, press **[•))]** (LOCATOR) to stop, then repeat this step.
- After pressing **[•))]** (LOCATOR), the rest of this procedure must be completed within 1 minute and 30 seconds.

5 **Handset:**
Press **[OK]**, then wait until a long beep sounds and Y stops flashing.
- When the handset has been registered successfully, Y will stop flashing. If the key tone is turned on, a confirmation tone will be heard.

7.2.1. Deregistering a Handset

A handset can cancel its own registration (or the registration of another handset) that is stored in the base unit. This will allow the handset to end its wireless connection with the system.

1 **[MENU]** (centre of joystick) → ⚿ → **[SELECT]**

2 **[▼]/[▲]**: "Registration" → **[SELECT]**

3 **[▼]/[▲]**: "Deregistration" → **[SELECT]**

4 **[3][3][5]** → **[OK]**
- The numbers of all handsets registered to the base unit are displayed.

5 Select the handset(s) you want to cancel, by pressing the desired handset number (**[1]** – **[6]**). → **[OK]**
- The selected handset number(s) flashes.
- To cancel a selected handset number, press the number again. The number stops flashing.

6 **[▼]/[▲]**: "Yes" → **[SELECT]**
- A long beep will sound as each handset number disappears.

7 After "Deregistered" is displayed, press **[OFF]**.

7.3. Copying Handset Phonebook Entries

You can copy handset phonebook entries to the handset phonebook of another compatible Panasonic handset.

Note:
- Group settings for phonebook entries are not copied.

Copying all entries

1 **[📖]** (left soft key) → **[MENU]**

2 **[▼]/[▲]**: "Copy all" → **[SELECT]**

3 Select the handset to copy to by pressing the desired handset number (**[1]** – **[6]**).
- When all entries have been copied, "Completed" is displayed.

4 **[OFF]**

7.4. Error Messages

If the unit detects a problem, one of the following messages is shown on the display.

Display message	Cause/solution
`Busy`	● The called handset is in use. ● The handset you are calling is too far from the base unit. ● There is no handset registered to the base unit matching the extension number you entered. ● Other units are in use and the system is busy. Try again later.
`Failed`	● Phonebook copy failed. Confirm the other handset (the receiver) is in standby mode and try again.
`Incomplete`	● The receiver's phonebook memory is full. Erase the unnecessary phonebook entries from the other handset (the receiver) and try again.
`Memory full`	● The handset's phonebook memory is full. Erase unnecessary entries.
`No items stored`	● Your phonebook, caller list or redial list is empty.

`No link to base.`
`Move closer to base,`
`try again.`
	● The handset has lost communication with the base unit. Move closer to the base unit and try again.
	● Unplug the base unit's AC adaptor to reset the unit. Reconnect the adaptor and try again.
	● The handset's registration may have been cancelled. Re-register the handset.

`Please lift up and` `try again.`	● A handset button was pressed while the handset was on the base unit or charger. Lift the handset and press the button again.

`You must first`
`subscribe to Caller`
`ID.`
	● You must subscribe to Call Display service. Once you receive caller information after subscribing to Call Display service, this message will not be displayed.

7.5. Troubleshooting

If you still have difficulties after following the instructions in this section, disconnect the base unit AC adaptor, then reconnect the base unit AC adaptor.

General use

Problem	Cause/solution
The unit does not work.	● Make sure the batteries are installed correctly and fully charged. ● Check the connections. ● Unplug the base unit's AC adaptor to reset the unit. Reconnect the adaptor and try again. ● The handset has not been registered to the base unit. Register the handset.
I cannot hear a dial tone.	● The base unit AC adaptor or telephone line cord is not connected. Check the connections. ● If you are using a splitter to connect the unit, remove the splitter and connect the unit to the wall socket directly. If the unit operates properly, check the splitter. ● Disconnect the unit from the telephone line and connect a known working telephone. If the working telephone operates properly, contact our service personnel to have the unit repaired. If the working telephone does not operate properly, contact your service provider/telephone company.
I do not know how to erase "missed call" from the display.	● There are unviewed missed calls remaining. View them using the following method. **1** [MENU] (centre of joystick) → ➡ → [SELECT] **2** Push the joystick down to search from the most recent call, or push the joystick up to search from the oldest call.

Programmable settings

Problem	Cause/solution
I have changed the display language to a language I cannot read.	• Change the display language.
I cannot program items.	• Programming is not possible while either the base unit or another handset is being used. Try again later.
While programming, the handset starts to ring.	• A call is being received. Answer the call and start again after hanging up.
I cannot register a handset to a base unit.	• The maximum number of handsets (6) is already registered to the base unit. Cancel unused handset registrations from the base unit. • Place the handset and the base unit away from other electrical appliances.

Battery recharge

Problem	Cause/solution
The batteries should be charging but the battery icon does not change.	• Clean the charge contacts and charge again.
The handset beeps intermittently and/or 🔲 flashes.	• Fully charge the batteries.
I fully charged the batteries, but 🔲 still flashes.	• Clean the charge contacts and charge again. • It is time to replace the batteries.
I fully charged the batteries, but the operating time seems to be short.	• Wipe the battery ends ($\oplus$, $\ominus$) and the unit contacts with a dry cloth.
The handset display is blank.	• The handset is in screen saver mode. Press **[OFF]** to activate the handset display again. • Confirm that the batteries are properly installed. • Fully charge the batteries.

Making/answering calls, intercom

Problem	Cause/solution
Ψ is flashing.	● The handset is not registered to the base unit. Register it. ● The handset is too far from the base unit. Move closer. ● The base unit AC adaptor is not connected. Check the connections. ● You are using the handset or base unit in an area with high electrical interference. Place the handset and base unit away from interference sources, such as antennas and mobile phones.
Ψ is displayed, but I cannot make a call.	● The handset and base unit could not communicate for some reason, such as interference from other electrical appliances. Perform the following: – Move the handset and base unit away from other electrical appliances. – Move closer to the base unit.
Static is heard, sound cuts in and out. Interference from other electrical units.	● Place the handset and the base unit away from other electrical appliances. ● Move closer to the base unit. ● If your unit is connected to a telephone line with DSL service, we recommend connecting a noise filter between the base unit and the telephone line jack. Contact your DSL provider for details.
Noise is heard during a call.	● You are using the handset or base unit in an area with high electrical interference. Place the handset and base unit away from interference sources, such as antennas and mobile phones.
The handset does not ring.	● The ringer volume is turned off. Adjust the ringer volume.
I cannot make a call.	● The dialing mode may be set incorrectly. Change the setting. ● Another handset is in use or the answering system is being used. Wait and try again later.
I cannot have a conversation using the headset.	● Make sure that an optional headset is connected properly.
I cannot make long distance calls.	● Make sure that you have long distance service.
I cannot page the handset.	● The called handset is too far from the base unit. ● The called handset is in use. Try again later.

Call Display

Problem	Cause/solution
The handset does not display the caller's name and/or phone number.	• You have not subscribed to Call Display service. Contact your service provider/telephone company to subscribe. • If your unit is connected to any additional telephone equipment such as a Call Display box or cordless telephone line jack, disconnect the unit from the equipment and plug the unit directly into the wall jack. • If your unit is connected to a telephone line with DSL service, we recommend connecting a noise filter between the base unit and the telephone line jack. Contact your DSL provider for details. • The name display service may not be available in some areas. Contact your service provider/telephone company for details. • Other telephone equipment may be interfering with this unit. Disconnect the other equipment and try again. • The caller requested not to send caller information. • If a call is being transferred to you, the caller information is not displayed. • Generally, caller information is displayed from the 2nd ring.
I cannot dial the phone number edited in the caller list.	• The phone number you dialed might have been edited incorrectly (for example, the long distance "1" or the area code is missing). Edit the phone number with another pattern.
The 2nd caller's information is not displayed during an outside call. (Visual Call Waiting feature does not function.)	• In order to use Call Display, Call Waiting, or Visual Call Waiting, you must first contact your service provider/telephone company and subscribe to the desired service. After subscribing, you may need to contact your service provider/telephone company again to activate this specific service, even if you already subscribed to both Call Display and Visual Call Waiting.

8.2.   Copying Phonebook Items when Repairing

You can copy the handset phonebook to another (compatible Panasonic) handset. This will help to save the original phonebook data which the customer has registered. Refer to the following procedures.

Phonebook data is stored in a handset.

HS

BS
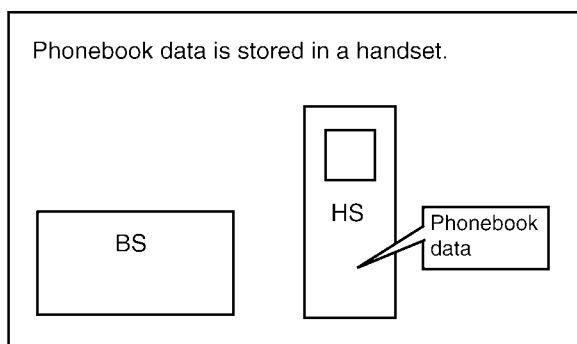

Phonebook data

Case 1: A base unit has a defect.
(Replacing a base unit PCB etc...)

BS (A)

NG

HS (A)

Service center has a normal BS (B).

BS (B)

HS (A)
1. Register HS (A) to BS (B).
   HS (A) is normal, therefore no need to copy the phonebook data.

Case 2: A base unit has a defect.
(Replacing both a base unit and a handset)

BS (A)

NG

HS (A)

Service center has a normal BS (B) and a normal HS (B).

BS (B)

HS (B)

HS (A)

②
1. Register HS (A) to BS (B) as a handset no. 2.
2. Copy the phonebook data from HS (A) to HS (B).
3. Cancel the HS 2 (HS (A)).

Note:
• BS=Base unit, HS=Handset
• If the max number of handsets are already registered to the base unit, a new handset cannot be registered.
• To register the handset, refer to **Registering a Handset to a Base Unit** (P.21).
• To cancel the handset, refer to **Deregistering a Handset** (P.21).
• To copy the handset phonebook, refer to **Copying Handset Phonebook Entries** (P.21).

Case 3: A handset has a defect.
(Radio transmission is functioning.)
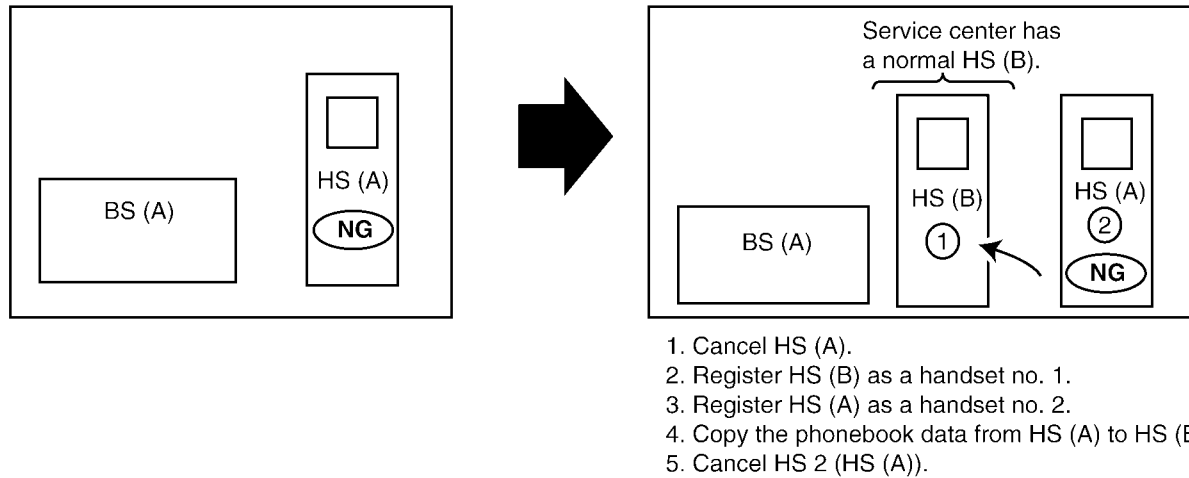

Service center has a normal HS (B).

HS (A)
NG

BS (A)

HS (B)
①

BS (A)

HS (A)
②
NG

1. Cancel HS (A).
2. Register HS (B) as a handset no. 1.
3. Register HS (A) as a handset no. 2.
4. Copy the phonebook data from HS (A) to HS (B).
5. Cancel HS 2 (HS (A)).

Case 4: A handset has a defect.
(Radio transmission is functioning.)

HS (A)
NG

BS (A)

Service center has a normal BS (B) and a normal HS (B).

HS (B)

BS (B)

HS (A)
②
NG

1. Register HS (A) as a handset no. 2.
2. Copy the phonebook data from HS (A) to HS (B).
3. Cancel HS 2 (HS (A)).
Note:
• BS=Base unit, HS=Handset
• If the max number of handsets are already registered to the base unit, a new handset cannot be registered.
• To register the handset, refer to **Registering a Handset to a Base Unit** (P.21).
• To cancel the handset, refer to **Deregistering a Handset** (P.21).
• To copy the handset phonebook, refer to **Copying Handset Phonebook Entries** (P.21).

8.3. How to Clear User Setting

Units are reset to the Factory settings by this operation (Erase stored Phone numbers, Caller list and etc.)

Note:
 • The reset menus differ depending on the following operations.
 • **This operation should not be performed for a usual repair.**

8.3.1. Resetting both base unit and handset
① Connect the AC adaptor to the base unit and install the charged batteries into the handset.

② Confirm the handset is registered to the base unit (⅄ lights).
   If the handset is not registered to the base unit (⅄ is flashing), register it. (*1)

③ Lift the handset and press **[OFF]** to put the handset in standby mode.

④ Press ⒈, ⒌, ⒐ and ✳ keys of the handset simultaneously until a confirmation tone is heard.

⑤ Press ⒉, ⒌, ⒏, ⓪.

⑥ Disconnect the AC adaptor, then remove the battery.

Note:
 (*1) Refer to **Registering a Handset to a Base Unit** (P.21).
 • Handset registration will not be reset.

8.3.2. Resetting only handset

The only handset is reset by doing the following steps ① to ④.
① Install the charged batteries into the handset.

② Lift the handset and press **[OFF]** to put the handset in standby mode.

③ Press ⒊, ⒌, ⒎ and # keys of the handset simultaneously until a confirmation tone is heard. (*2)

④ Remove the battery.

Note: (*2)
 • The registration of the base unit and the handset are cancelled.
 • If the handset needs to be registered to the base unit, refer to **Registering a Handset to a Base Unit** (P.21).
 • If users do not bring the base unit with them, the registration procedure has to be done by users themselves.
 • Caller ID data will not be reset.

8.3.3. Delete all handset registration of base unit
① Press and hold **[•)))] (LOCATOR)** button for more than 30 seconds.

9.1.4.   Check the RF part

9.1.4.1.   Finding out the Defective part

1. Prepare Regular HS (Handset) and Regular BU (Base unit).
2. a. Re-register regular HS (Normal mode) to Base Unit (to be checked).
     If this operation fails in some ways, the Base Unit is defective.
   b. Re-register Handset (to be checked) to regular BU (Normal mode).
     If this operation fails in some ways, the Handset is defective.

After All the Checkings or Repairing
1. Re-register the checked Handset to the checked Base Unit, and Regular HS to Regular BU.

9.2. Troubleshooting by Symptom (Base Unit)

9.2.1. Check Point (Base Unit)

Please follow the items below after repairing.

Note:

After the measuring, suck up the solder of TP.

*: **PC Setting** (P.54) is required beforehand.

The connections of simulator equipment are as shown in **Adjustment Standard (Base Unit)** (P.56).

	Items	Check Point	Procedure	Check or Replace Parts
(**A**)	3.3 V Supply Confirmation	VDD3	1. Confirm that the voltage between test point VDD3 and GND is 3.3 V ± 0.2 V.	IC1, C30, C32, R38, R39, C36, C37
(**B**)	2.5 V Supply Confirmation	VDD2	1. Confirm that the voltage between test point VDD2 and GND is 2.5 V ± 0.2 V.	Q9, C70, C71
(**C**)	1.8 V Supply Confirmation	VDD1	1. Confirm that the voltage between test point VDD1 and GND is 1.8 V ± 0.1 V.	Q8, R72, D12, C64, C68
(**D**)*	BBIC Clock Adjustment	CLK	1. Input Command "rdeeprom 00 01 01", then you can confirm the current value. 2. If the frequency is not 10.368 MHz ± 100Hz, adjust the frequency of CLK executing the command "setfreq xx (where xx is the value)" so that the reading of the frequency counter is 10.368000 MHz ± 10 Hz.	IC10, C111, C112, X1, R73, C62, C63

9.3. Troubleshooting by Symptom (Handset)

9.3.1. Check Point (Handset)

Please follow the items below after repairing.

Note:

After the measuring, suck up the solder of TP.

*: **Batch file Settings** (P.59) is required beforehand.

The connections of adjustment equipment are as shown in **Adjustment Standard (Handset)** (P.60).

	Items	Check Point	Procedure	Check or Replace Parts
(**A**)*	1.8 V Supply Adjustment	VDD1	1. Confirm that the voltage between test point 1.8 V and GND is 1.8 V ± 0.02 V. 2. Execute the command "bandgap", then check the current value. 3. Adjust the 1.8V voltage of VDD1 executing command "bandgap XX"(XX is the value).	IC1, Q2, C10
(**B**)	DC/DC Supply Confirmation	VDD3	1. Confirm that the voltage between test point VDD3 and GND is 4.0 V ± 0.3 V (Backlight is ON).	IC1, F1, C1, C2, C3, R1, Q1, D1, L1
(**C**)	2.5 V Supply Confirmation	VDD2	1. Confirm that the voltage between test point 2.5 V and GND is 2.5 V ± 0.1 V.	IC1, Q3, C5
(**D**)	Charge Control Check & Charge Current Monitor Check	-	1. Apply 3.5 V between J3(+) and J4(-) with DC power supply and set current limit to 250 mA. 2. Confirm that the current limit LED of DC power supply is ON/OFF. 3. Decrease current limit of DC power supply to 100 mA. 4. Confirm that the current limit LED of DC power supply is stable. (Current limiter is ON.) (If charge control cannot be confirmed by this procedure, please use battery to handset power supply and try again.)	IC1, Q4, Q5, Q9, D7, D8, L4, L5, R5, R6, R7, F1
(**E**)	Battery Low Confirmation	-	1. Apply 2.40 V between BATT(+) and BATT(-). 2. Confirm that there is no flashing of Battery Icon. 3. Apply 2.25 V ± 0.08 V between BATT(+) and BATT(-). 4. Confirm that there is flashing of Battery Icon.	IC1, F1, C1 C3, R12
(**F**)*	BBIC Clock Adjustment	CLK	1. Apply 2.6 V between BATT(+) and BATT(-) with DC power. 2. Execute the command "conttx". 3. Input Command "rdeeprom 00 01 01", then you can confirm the current value. 4. If the frequency is not 10.368 MHz ± 100Hz, adjust the frequency of CLK executing the command "setfreq xx (where xx is the value)" so that the reading of the frequency counter is 10.368000 MHz ± 10 Hz. Note: CLK is displayed only for a few seconds when executing the command "conttx" after battery is inserted.	IC1, X1, C6, C7, IC4, C57

9.4. How to Replace the Flat Package IC

Even if you do not have the special tools (for example, a spot heater) to remove the Flat IC, with some solder (large amount), a soldering iron and a cutter knife, you can easily remove the ICs that have more than 100 pins.

9.4.1. Preparation

• PbF (: Pb free) Solder

• Soldering Iron

Tip Temperature of 700 °F ± 20 °F (370 °C ± 10 °C)

Note: We recommend a 30 to 40 Watt soldering iron. An expert may be able to use a 60 to 80 Watt iron where someone with less experience could overheat and damage the PCB foil.

• Flux

Recommended Flux: Specific Gravity → 0.82.

Type → RMA (lower residue, non-cleaning type)

Note: See **About Lead Free Solder (Pbf: Pb free)** (P.4)

9.4.2. How to Remove the IC

1. Put plenty of solder on the IC pins so that the pins can be completely covered.
   Note:
   If the IC pins are not soldered enough, you may give pressure to the P.C. board when cutting the pins with a cutter.
Solder

2. Make a few cuts into the joint (between the IC and its pins) first and then cut off the pins thoroughly.

Cutter
Solder

3. While the solder melts, remove it together with the IC pins.
Solder

When you attach a new IC to the board, remove all solder left on the board with some tools like a soldering wire. If some solder is left at the joint on the board, the new IC will not be attached properly.

9.4.3.   How to Install the IC

1. Temporarily fix the FLAT PACKAGE IC, soldering the two marked pins.

● – – – – – – Temporary soldering point.
*Check the accuracy of the IC setting with the corresponding soldering foil.
2. Apply flux to all pins of the FLAT PACKAGE IC.

– – – – – Flux
3. Solder the pins, sliding the soldering iron in the direction of the arrow.

Soldering Iron

Specified Solder
9.4.4.   How to Remove a Solder Bridge

1. Lightly resolder the bridged portion.
2. Remove the remaining solder along the pins using a soldering iron as shown in the figure below.

Bridge

Soldering Iron

9.5. How to Replace the LLP (Leadless Leadframe Package) IC

9.5.1. Preparation

• PbF (: Pb free) Solder
• Soldering Iron
  Tip Temperature of 700°F ± 20°F (370°C ± 10°C)
  Note:
  We recommend a 30 to 40 Watt soldering iron. An expert may be able to use a 60 to 80 Watt iron where someone with less experience could overheat and damage the PCB foil.
• Hot Air Desoldering Tool
  Temperature: 608°F ± 68°F (320°C ± 20°C)

9.5.2. Caution

• To replace the IC efficiently, choose the right sized nozzle of the hot air desoldering tool that matches the IC package.
• Be careful about the temperature of the hot air desoldering tool not to damage the PCB and/or IC.

9.5.3. How to Remove the IC

1. Heat the IC with a hot air desoldering tool through the P. C. board.

IC
P. C. board
Hot air desoldering tool
2. Pick up the IC with tweezers, etc. when the solder is melted completely.
   Note:
   • Be careful not to touch the peripheral parts with tweezers, etc. They are unstable.

Tweezers, etc.
IC
P. C. board
When it is hard to melt the solder completely, heat it with a hot air desoldering tool through the IC besides through the P. C. board.

P. C. board
Hot air desoldering tools
3. After removing the IC, clean the P. C. board of residual solder.

9.5.4.   How to Install the IC
1. Place the solder a little on the land where the radiation GND pad on IC bottom is to be attached.

Land — Soldering iron
Solder

P. C. board

2. Place the solder a little on the land where IC pins are to be attached, then place the IC.
   Note:
   • When placing the IC, the positioning should be done very carefully.

IC

Land — Solder iron

Solder

P. C. board

3. Heat the IC with a hot air desoldering tool through the P. C. board until the solder on IC bottom is melted.
   **Note:**
   • Be sure to place it precisely, controlling the air volume of the hot air desoldering tool.

IC

P. C. board

Hot air desoldering tool
4. After soldering, confirm there are no short and open circuits with visual inspection.

9.5.5.   How to Remove a Solder Bridge

When a Solder Bridge is found after soldering the bottom of the IC, remove it with a soldering iron.
Solder iron

Bridge
# 10 Disassembly and Assembly Instructions

10.1. Disassembly Instructions

10.1.1. Base Unit

① Remove the 3 screws to remove the cabinet cover.

① 3 screws

② Remove the solders to remove the main P.C. board.

Main P. C. board

(*1)

② Solders

<Note for Disassembly>

(*1) If the Main P. C. board is pulled by force and the charge terminals are bent or broken, please refer to the following.

① Cut the charge terminals as shown in the above figure.

② Connect the charge terminals to the Main P. C. board by lead wires.

10.1.2. Handset

① **Remove the 2 screws.**

① 2 screws

② **Insert a JIG (PQDJ10006Y) between the cabinet body and the cabinet cover, then pull it along the gap to open the cabinet.**

Cabinet body

Cabinet cover

③ **Likewise, open the other side of the cabinet.**
④ **Remove the cabinet cover by pushing it upward.**

Cabinet cover

Main P. C. board.
⑦ Screw

⑤ **Remove the tape and solders.**

⑤ Tape and solders

⑥ **Remove the 2 screws to remove the 2 charge terminals.**

⑦ **Remove the screw to remove the main P. C. board.**

⑥ 2 charge terminals

⑥ 2 screws
10.1.3. Charger Unit

① **Remove the screw to remove the cabinet cover.**

② **Remove the solders.**

① Screw

OK

DON'T OUT FROM
THIS AREA.

② Solders
③ **Remove the screw to remove the main P. C. board.**

③ Screw
Main P. C. board

10.2. Assembly Instructions

10.2.1. Fix the LCD to the Main P.C.Board (Handset)

① Attach LCD to P.C.B.
*When attaching the LCD holder,
don't pull the FPC (Flexible Print Circuit).

LCD

Ⓐ

Ⓑ

FPC

P.C.B.

Ⓐ

Ⓑ

Lock.
② Locate the Flat Cable inside as shown.

Ⓐ
(Lock.)
③ Solder the narrow Cable to the P.C.B.
*When soldering, don't give the load to the FPC.

Solder (2 points)

Peel off the double side tape
before soldering.

Match the each hole on the Cable
and on the P.C.B.

11 Measurements and Adjustments

11.1. The Setting Method of JIG (Base Unit)

11.1.1. Preparation

11.1.1.1. Equipment Required

- Frequency counter: It must be precise enough to measure intervals of 1 Hz (precision; ±4 ppm).
  Hewlett Packard, 53131A is recommended.
- Digital multi-meter (DMM): It must be able to measure voltage and current.
- Oscilloscope

11.1.1.2. JIG and PC

- Serial JIG
  JIG Cable: PQZZ1CD300E
- PC which runs in DOS mode
- **Batch file CD-ROM** for setting: PQZZTG8202C

11.1.2. PC Setting

11.1.2.1. Connections

①Connect the AC adaptor to CN2 (base unit).

②Connect the JIG Cable GND (black) to J104.

③Connect the JIG Cable RX (red) to J103 and TX (yellow) to J102.

Base unit P. C. board
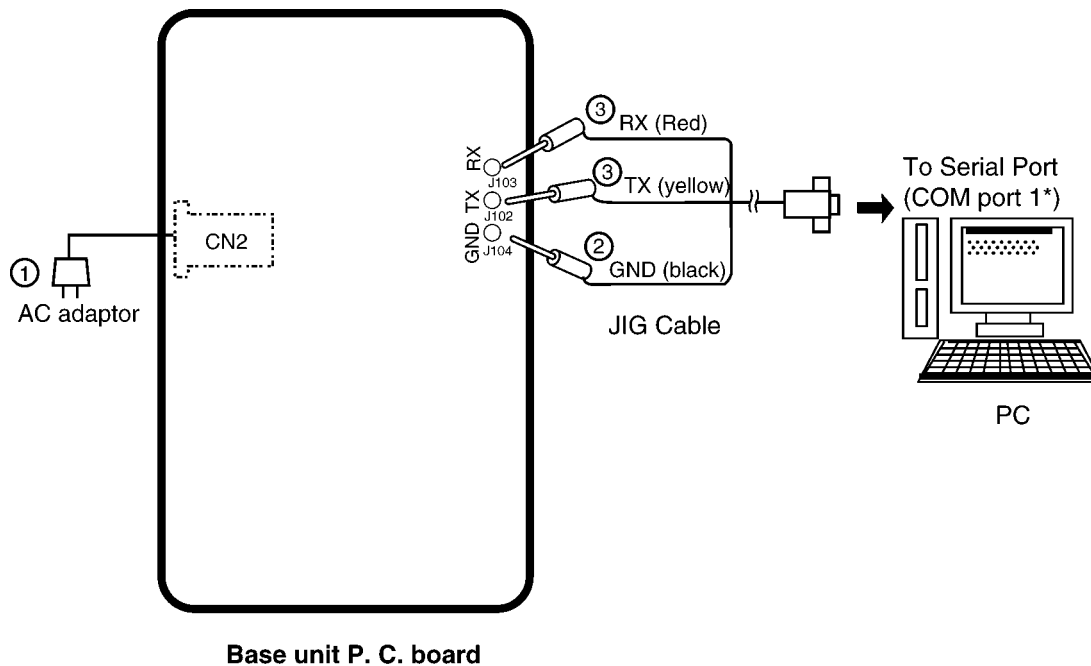

Note:
  *: COM port names may vary depending on what your PC calls it.

11.1.2.2. Batch file Settings

1. Insert the Batch file CD-ROM into CD-ROM drive and copy PQZZTG**** folder to your PC (example: D drive).

2. Open an MS-DOS mode window.

<Example for Windows>

On your computer, click **[Start]**, select **Programs** (**All Programs** for Windows XP/Windows Server 2003), then click
MS-DOS Prompt. (for Windows 95/Windows 98)
Or
Accessories-MS-DOS Prompt. (for Windows Me)
Or
Command Prompt. (for Windows NT 4.0)
Or
Accessories-Command Prompt.
(for Windows 2000/Windows XP/Windows Server 2003)

3. At the DOS prompt, type "**D:**" (for example) to select the drive, then press the **Enter** key.

4. Type "**CD ¥PQZZTG*****", then press the **Enter** key.

<Example: correct setting>

```
C: ¥Documents and Settings>D:
D: ¥>CD ¥PQZZTG****
D: ¥PQZZTG**** >SET_COM=X
D: ¥PQZZTG****>READID
00 52 4F A8 A8
D: ¥PQZZTG****>DOSKEY
D: ¥PQZZTG****>▄
```

5. Type "**SET_COM=X**", then press the **Enter** key
(**X**: COM port number used for the serial connection on your PC).

6. Type "**READID**", then press the **Enter** key.
  ・If any error messages appear, change the port number or check the cable connection.
  ・If any value appear, go to next step.

7. Type "**DOSKEY**", then press the **Enter** key.

<Example: incorrect setting>

```
C: ¥Documents and Settings>D:
D: ¥>CD ¥PQZZTG****
D: ¥PQZZTG**** >SET_COM=X
D: ¥PQZZTG****>READID
   CreateFile error
ERROR 10: Can't open serial port
D: ¥PQZZTG ****>▄
```

Note:
  • "****" varies depending on the country.

11.1.2.3. Commands

See the table below for frequently used commands.

Command name	Function	Example
rdeeprom	Read the data of EEPROM	Type "rdeeprom 00 00 FF", and the data from address "00 00" to "FF" is read out.
readid	Read ID (RFPI)	Type "readid", and the registered ID is read out.
writeid	Write ID (RFPI)	Type "writeid 00 18 E0 0E 98", and the ID "0018 E0 0E 98" is written.
setfreq	Adjust Frequency of RFIC	Type "setfreq nn".
hookoff	Off-hook mode on Base	Type "hookoff".
hookon	On-hook mode on Base	Type "hookon".
getchk	Read checksum	Type "getchk".
wreeprom	Write the data of EEPROM	Type "wreeprom 01 23 45". "01 23" is address and "45" is data to be written.
bursttx	Burst TX mode	Type "bursttx"
testrx	Test RX mode	Type "testrx"
tph	High TX power	Type "tph"
tpl	Low TX power	Type "tpl"

11.2. Adjustment Standard (Base Unit)

When connecting the simulator equipment for checking, please refer to below.

11.2.1. Flow Solder Side View

Note:
(**A**) - (**D**) is referred to **Check Point (Base Unit)** (P.44)
(*1) is referred to No.3 of **Check Table for RF part** (P.41)

11.3. Adjustment Standard (Charger Unit)

When connecting the simulator equipment for checking, please refer to below.

11.3.1. Flow Solder Side View
11.4. The Setting Method of JIG (Handset)

11.4.1. Preparation

11.4.1.1. Equipment Required

- Frequency counter: It must be precise enough to measure intervals of 1 Hz (precision; ±4 ppm). Hewlett Packard, 53131A is recommended.
- DC power: It must be able to output at least 1 A current under 2.4 V for Handset.
- Digital multi-meter (DMM): It must be able to measure voltage and current.
- Oscilloscope

11.4.1.2. JIG and PC

- Serial JIG
  JIG Cable: PQZZ1CD300E
- PC which runs in DOS mode.
- **Batch file CD-ROM** for setting: PQZZTG8202C

11.4.2. PC Setting

11.4.2.1. Connections

①Connect the DC Power or Battery to J1 (BATT+) and J2 (BATT-) (Handset).

②Connect the JIG cable GND (black) to GND.

③Connect the JIG cable UTX (yellow) to UTX and URX (red) to URX.

Handset P. C. board
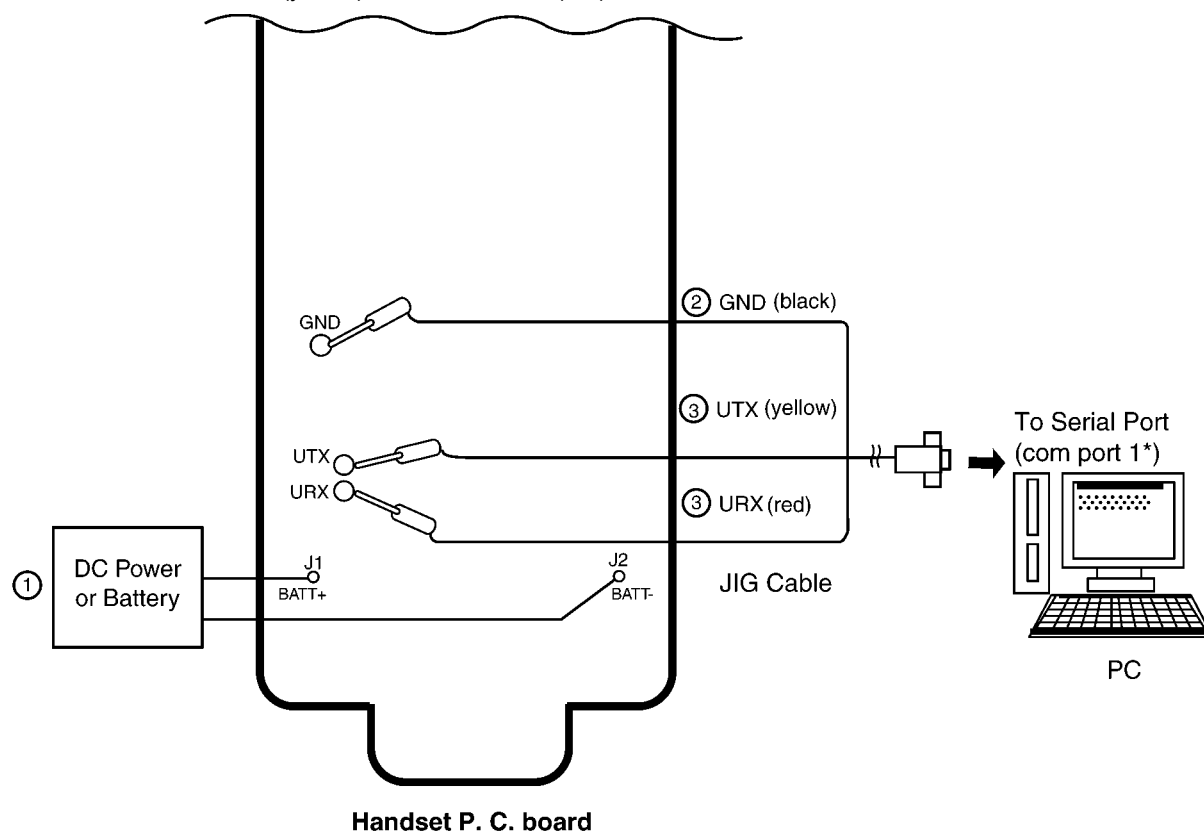

Note:
  *: Com port names may vary depending on what your PC calls it.

11.4.2.2.   Batch file Settings

1. Insert the Batch file CD-ROM into CD-ROM drive and
copy PQZZTG***** folder to your PC (example: D drive).

<Example for Windows>

2. Open an MS-DOS mode window.

On your computer, click **[Start]**, select **Programs**
(**All Programs** for Windows XP/Windows Server 2003),
then click
MS-DOS Prompt. (for Windows 95/Windows 98)
Or
Accessories-MS-DOS Prompt. (for Windows Me)
Or
Command Prompt. (for Windows NT 4.0)
Or
Accessories-Command Prompt.
(for Windows 2000/Windows XP/Windows Server 2003)

3. At the DOS prompt, type "**D:**" (for example) to select the
drive, then press the **Enter** key.

4. Type "**CD ¥PQZZTG*****", then press the **Enter** key.

<Example: correct setting>

5. Type "**SET RTX_COM=X**", then press the **Enter** key
(**X**: COM port number used for the serial connection on your PC).

```
C: ¥Documents and Settings>D:
D: ¥>CD ¥PQZZTG*****
D: ¥PQZZTG***** >SET RTX_COM=X
D: ¥PQZZTG*****>READID
00 52 4F A8 A8
D: ¥PQZZTG*****>DOSKEY
D: ¥PQZZTG*****>  ▬
```

6. Type "**READID**", then press the **Enter** key.
・If any error messages appear, change the port number or
check the cable connection.
・If any value appear, go to next step.

7. Type "**DOSKEY**", then press the **Enter** key.

<Example: incorrect setting>

```
C: ¥Documents and Settings>D:
D: ¥>CD ¥PQZZTG*****
D: ¥PQZZTG***** >SET RTX_COM=X
D: ¥PQZZTG*****>READID
   CreateFile error
ERROR 10: Can't open serial port
D: ¥PQZZTG*****>  ▬
```

Note:
• "*****" varies depending on the country.

11.4.2.3.   Commands

See the table below for frequently used commands.

Command name	Function	Example
rdeeprom	Read the data of EEPROM	Type "rdeeprom 00 00 FF", and the data from address "00 00" to "FF" is read out.
readid	Read ID (RFPI)	Type "readid", and the registered ID is read out.
writeid	Write ID (RFPI)	Type "writeid 00 18 E0 0E 98", and the ID "0018 E0 0E 98" is written.
setfreq	Adjust Frequency of RFIC	Type "setfreq nn".
getchk	Read checksum	Type "getchk".
wreeprom	Write the data of EEPROM	Type "wreeprom 01 23 45". "01 23" is address and "45" is data to be written.
bursttx	Burst TX mode	Type "bursttx"
testrx	Test RX mode	Type "testrx"
tph	High TX power	Type "tph"
tpl	Low TX power	Type "tpl"

11.5.   Adjustment Standard (Handset)

When connecting the simulator equipment for checking, please refer to below.

11.5.1.   Component View
Note:

(**A**) - (**F**) is referred to **Check Point (Handset)** (P.44)

(*1) is referred to No.3 of **Check Table for RF part** (P.41)

(*2) is referred to No.4, 5 of **Check Table for RF part** (P.41)

11.6. Things to Do after Replacing IC or X'tal

Cautions:

Some of the content on this page may not apply to models from some countries. The contents below are the minimum adjustments required for operation.

11.6.1. Base Unit

Before making the following adjustment, ensure you have carried out **PC Setting** (P.54) in **The Setting Method of JIG (Base Unit)**.

Items		Necessary Adjustment
BBIC (IC7)	Programs for Voice processing, interface for RF and EEPROM	1. Clock adjustment: Refer to Check Point (D). (*1)
EEPROM (IC5)	Adjustment parameter data (country version batch file, default batch file, etc.)	
X'tal (X1)	System clock	

Note:

(*1) Refer to **Check Point (Base Unit)** (P.44)

11.6.2. Handset

Before making the following adjustment, ensure you have carried out **PC Setting** (P.58) in **The Setting Method of JIG (Handset)**.

Items		Necessary Adjustment
BBIC (IC1)	Programs for Voice processing, interface for RF and EEPROM	1. Clock adjustment: Refer to Check Point (F). (*2) 2. 1.8 V setting and battery low detection: Refer to Check Point (A), (B) and (C). (*2)
EEPROM (IC3)	Adjustment parameter data (country version batch file, default batch file, etc.)	
X'tal (X1)	System clock	

Note:

(*2) Refer to **Check Point (Handset)** (P.44)

11.7.   How to Check the Handset Speaker or Receiver

1. Prepare the digital voltmeter, and set the selector knob to ohm meter.
2. Put the probes at the speaker terminals as shown below.

SPEAKER:
     Is the value between
     (+) terminal and (–) terminal about 8 Ω?
RECEIVER:
     Is the value between
     (+) terminal and (–) terminal about 32 Ω?

YES → OK

NO → NG → Replace the speaker (receiver).

Handset speaker (receiver)

Digital Voltmeter
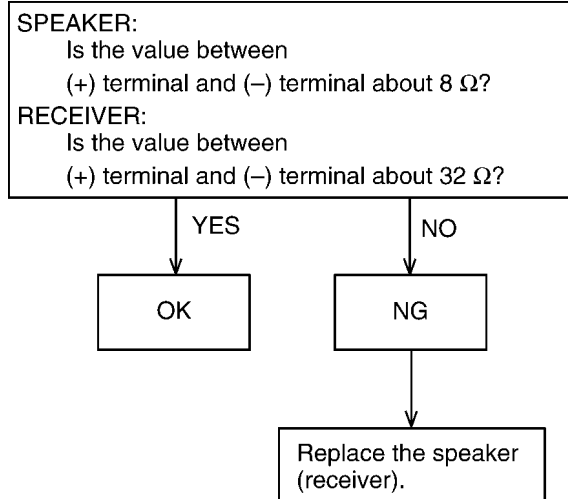

11.8.   Frequency Table (MHz)

Channel No	BASE UNIT		HANDSET	
	Transmit Frequency	Receive Frequency	Transmit Frequency	Receive Frequency
0	1928.448	1928.448	1928.448	1928.448
1	1926.720	1926.720	1926.720	1926.720
2	1924.992	1924.992	1924.992	1924.992
3	1923.264	1923.264	1923.264	1923.264
4	1921.536	1921.536	1921.536	1921.536

Note:
    Channel No. 2: In the Test Mode on Base Unit and Handset.

15.5. Replacement Part List

1. RTL (Retention Time Limited)

   Note:

   The marking (RTL) indicates that the Retention Time is limited for this item.

   After the discontinuation of this assembly in production, the item will continue to be available for a specific period of time. The retention period of availability is dependant on the type of assembly, and in accordance with the laws governing part and product retention. After the end of this period, the assembly will no longer be available.

2. Important safety notice

   Components identified by the ⚠ mark indicates special characteristics important for safety. When replacing any of these components, only use specified manufacture's parts.

3. The S mark means the part is one of some identical parts. For that reason, it may be different from the installed part.

4. ISO code (Example: ABS-94HB) of the remarks column shows quality of the material and a flame resisting grade about plastics.

5. RESISTORS & CAPACITORS

   Unless otherwise specified;

   All resistors are in ohms (Ω) K=1000Ω, M=1000kΩ

   All capacitors are in MICRO FARADS (μF)P=μμF

   *Type & Wattage of Resistor
